

Task 1 — Demand Forecast: Methodology & Results

Fast&Up; (Aeronutrix) | Supply Chain AI Intern Assignment | Arya Manjardekar | April 2026

Objective

Forecast FY26 SKU-level demand to support procurement planning for Fast&Up;'s 3× growth target (Rs.10.5 Cr → Rs.31.5 Cr). Develop per-SKU revenue projections and unit demand estimates to drive the budget optimization in Task 3.

Methodology

Step 1 — Historical Revenue Construction: Annual company revenue (FY22–FY25) was disaggregated into per-SKU revenue using market-informed split percentages. Reload Orange (flagship hydration product) starts at 42% share, declining gradually as newer premium SKUs (Plant Protein Chocolate) gain share — reflecting industry trends in the Indian sports nutrition market.

Step 2 — Growth Multiplier Assignment: Each SKU received a FY26 growth multiplier based on product trajectory and category dynamics:

- Reload Orange (2.5×) — Flagship, growing but facing market saturation at the premium end
- Reload E&V; (3.5×) — Newer electrolyte variant with strong channel adoption
- Plant Protein Chocolate (3.8×) — Fastest growing SKU; premium segment, gym channel expansion
- Lean Body (2.8×) — Stable mid-tier performer, steady gym channel
- Daily Fiber (2.6×) — Niche health segment, steady growth

Step 3 — Unit Demand Calculation: FY26 revenue per SKU was converted to unit demand using product-specific average selling prices (Reload Orange: Rs.450/unit; Plant Protein: Rs.1,800/unit, etc.), reflecting Fast&Up;'s actual product pricing.

Results

SKU	FY25 Revenue (Cr)	Growth	FY26 Revenue (Cr)	FY26 Units
Reload Orange	3.78	2.5×	9.45	2,10,000
Reload E&V	1.155	3.5×	4.04	77,740
Plant Protein Chocolate	2.415	3.8×	9.18	50,983
Lean Body	1.890	2.8×	5.29	33,075
Daily Fiber	1.260	2.6×	3.28	40,949
TOTAL	10.50	—	31.24	4,12,747

Key Findings

- **Target achieved:** FY26 projected revenue of Rs.31.24 Cr vs Rs.31.5 Cr target — 99.3% of goal.
- **Plant Protein leads revenue growth** but has highest unit cost (Rs.1,800/unit), creating procurement pressure.
- **Reload Orange dominates volume** (51% of all units) but lower price point means margin requires scale.
- **Total units: 4,12,747** — sets the baseline for all reorder and budget optimization calculations.

Limitations & Assumptions

- Growth multipliers are assumption-based (SKU-level historical data unavailable); actual POS data would sharpen accuracy.

- Unit prices assumed fixed; pricing changes or promotional discounts would alter unit volume projections.
- No external demand signals (weather, competitor launches, macro trends) incorporated in this version.
- 3-year forward projections carry higher uncertainty — recommend quarterly rolling reforecast.
